PART-ONE

需求分析与架构确立

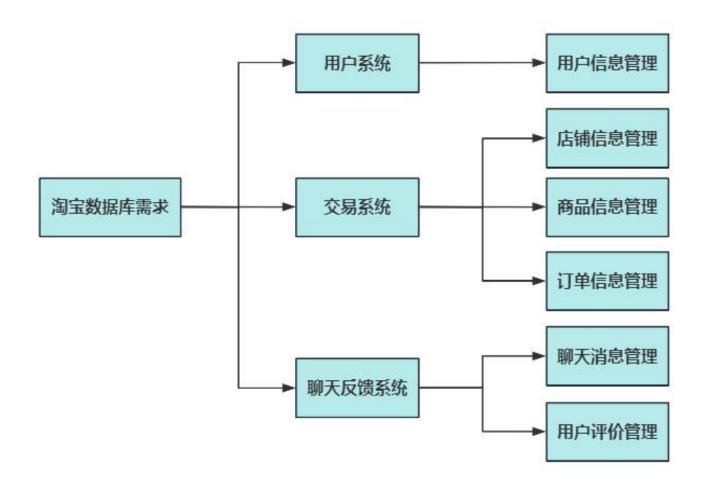

Requirements Analysis and Architecture Establishment

需求分析

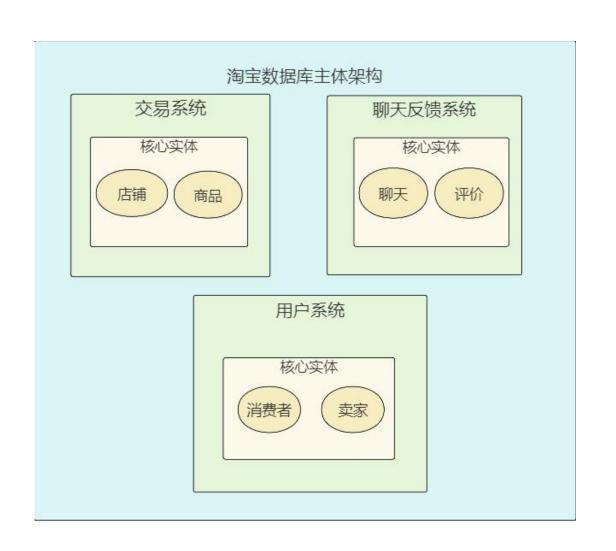

核心功能需求分析

- 消费者:能够浏览、购买商品,将商品加入购物车等
- 卖家:能够管理店铺,上架、下架商品, 管理订单,跟踪物流情况等
- 消费者和卖家的联系:消费者能够通过客服聊天等进行反馈,能够对购买的商品进行评价

主体架构确立

- 用户系统包括用户、消费者、卖家、 红包、优惠券、淘宝历程、收货地 址、档案等实体
- 交易系统包括店铺、商品、商品子 类、活动、店铺评分、商品物流等 实体
- 聊天反馈系统包括官方客服、用户 评价、用户评论、问题、群组、对 话消息、群组消息、请求等实体

部分细节分析展示

用户系统

- (1) 消费者可以<u>浏览商品</u>,淘宝数据库需要记录<u>浏览的商品信息与浏览时间</u>,并且能够根据<u>浏览时间</u>进行 查询。浏览记录最多<u>保留30天</u>
 - (2) 消费者可以将商品加入购物车,并能实时查看购物车的商品信息。购物车最多添加120个商品。
 - (3) 消费者可以收藏商品,并在收藏商品后能按收藏时间和分类进行查询。
 - (4) 消费者购买商品后能实时检测订单状态,查看物流信息。
 - (5) 消费者也可以关注店铺,实时获得店铺最新消息,并能浏览店铺中所有商品。
 - (6) 消费者可以有多个<u>收货地址</u>,在购买商品时可以自行选择收货地址。若未选择则使用<u>默认地址</u>。
- (7) 消费者能获得<u>红包、优惠券</u>,购买商品后可以<u>积累淘金币</u>,在购买商品时可以使用优惠券、淘金币进 行优惠
 - (8) 卖家需要区分主账号子账号,并且主账号能够管理子账号

部分细节分析展示

交易系统

- (1) 用户可以创建店铺,同一个身份证仅能创建一家店铺。
- (2) 店铺可以添加商品,在添加商品时,可以指定商品的类目。
- (3) 用户可以给店铺打分。所有用户打分的平均值决定了该店铺的总体评分。
- (4) 用户可以对商品给出评分。
- (5) <u>图片以链接也就是字符串形式存储在数据库</u>中。淘宝有自己的文件系统TFS来保存图片视频等,因此数据库里采用链接的形式存储图片视频,以节省数据库空间,提升查询效率。
 - (6) 卖家可以为商品分配特定的物流, 买家可以更换商品的物流公司。
- (7) <u>订单</u>有几个状态: 待付款、待发货、待收货、待评价、待退款, 订单完成后不会被删除, 因为日后用户可能会查询之前买过的商品。待付款超出24小时后自动删除订单。

部分细节分析展示

聊天反馈系统

- (1) 只有当一个消费者购买某样商品并且确认收货,才能对该商品进行评价,确认收货之前不能评价。
- (2) 消费者可以在交易完成以后的15天内进行评价。
- (3) 消费者在进行中评或者差评的评价以后,是可以<u>修改评价</u>为好评的,但只能在做出评价的<u>30天内</u>进行操作。若消费者给出的是中差评,其评价被删除或者修改以后,其追加的评论同时也会被删除。
- (4) <u>商品评价共享</u>:消费者可以在商品中看到其它消费者的评价,可以对消费者的评价进行评论。一个消费者可以对一条评价进行多条评论,一条评价可以被多个消费者评论,消费者的评论可以被消费者点赞。
- (5) <u>商品提问</u>: 消费者可以以商品的质量、样式等内容向其它消费者进行提问, 其它消费者可以在该商品中看到问题, 而且可以回答问题。一个消费者可以提出多个问题, 一个问题只能属于一个消费者。

数据库实现

Database implementation

细化表结构

消费者表

列名	说明	数据类型	约束
user_id	用户账号	VARCHAR(20)	NOT NULL, PRIMARY KEY
user_name	用户名	VARCHAR(30)	NULL DEFAULT NULL
password_	密码	VARCHAR(20)	NOT NULL,密码位数不少于 8 位
gender	性别	CHAR(1)	NOT NULL,取值必须为"M"或"F"
telephone	电话	CHAR(11)	NOT NULL
membership	会员	BOOLEAN	NOT NULL
credit	信誉	INT	NOT NULL,正数
headshot	头像	VARCHAR(500)	NULL DEFAULT NULL
fan_number	粉丝数目	INT	NOT NULL,正数
focus_number	关注人数	INT	NOT NULL,正数
likes	获赞数目	INT	NOT NULL,正数
change	零钱	DOUBLE PRECISION	NOT NULL,正数
shopping_coin	淘金币	INT	NOT NULL,正数
alipay	支付宝号	VARCHAR(20)	NULL DEFAULT NUL
type_	类别	VARCHAR(10)	NOT NULL,类型为"comsumer"
shopping_cart	购物车	VARCHAR(3000)	NULL DEFAULT NULL

数据存储形式:图片以链接(字符串)形式存储于数据库中,以此节省存储空间并提升查询效率。

优惠券关系表

列名	说明	数据类型	约束
coupon_id	优惠券标号	SERIAL	NOT NULL, PRIMARY KEY
store_id	店铺标号	VARCHAR(20)	NOT NULL, FOREIGN KEY
value	价值	DOUBLE PRECISION	NOT NULL
condition	使用条件	VARCHAR(20)	NOT NULL
end_date	截至日期	DATE	NOT NULL

规定主键外键,为每个属性设计约束

表项命名:

- 实体表以实体命名,关系表以关系名称命名。 对于联系两张表的中间关系表,名字以下划线间隔 (表一_两者关系_表二)命名。 字段命名依据实际名称命名,字段长度结合实际应
- 用设置。

SQL语句-建表

```
-- 创建消费者表
      CREATE TABLE consumer (
          user id VARCHAR(20) NOT NULL PRIMARY KEY,
         user name VARCHAR(30) NULL DEFAULT NULL,
         password VARCHAR(20) NOT NULL CHECK (LENGTH(password ) >= 8),
          gender CHAR(1) NOT NULL CHECK (gender IN ('M', 'F')),
         telephone CHAR(11) NOT NULL,
         membership BOOLEAN NOT NULL,
          credit INT NOT NULL CHECK (credit >= 0),
         headshot VARCHAR(500) NULL DEFAULT NULL, -- 存储用户头像的地址
          fan number INT NOT NULL CHECK (fan number >= 0),
          focus number INT NOT NULL CHECK (focus number >= 0),
          likes INT NOT NULL CHECK (likes >= 0),
          change DOUBLE PRECISION NOT NULL CHECK (change >= 0), -- 零钱
          shopping coin INT NOT NULL CHECK (shopping coin >= 0),
          alipay VARCHAR(20) NULL DEFAULT NULL,
          type VARCHAR(10) NOT NULL, CHECK (type = 'consumer'),
          shopping cart VARCHAR(3000) NULL DEFAULT NULL
353
```

```
-- 创建优惠券表
CREATE TABLE coupon (
coupon_id SERIAL NOT NULL PRIMARY KEY,
store_id VARCHAR(20) NOT NULL,
value_ DOUBLE PRECISION NOT NULL,
condition_ VARCHAR(20) NOT NULL,
end_date DATE NOT NULL,
FOREIGN KEY (store_id) REFERENCES store (store_id)
);
```

创建消费者表

创建优惠券关系表

SQL语句-视图

商品子表视图

```
CREATE VIEW com food AS SELECT commodity.com name, commodity.price, commodity.dis price, commodity.description, commodity.detail, commodity.com image, shelf life, weig
                                          FROM commodity join food on commodity.com id = food.com id
                                          where commodity.category = 'food';
DROP VIEW com food;
 CREATE VIEW com cloth AS SELECT commodity.com name, commodity.price, commodity.dis price, commodity.description, commodity.detail, commodity.com image, type, size
                                          FROM commodity join cloth on commodity.com id = cloth.com id
                                          where commodity.category = 'cloth';
 DROP VIEW com cloth:
 CREATE VIEW com ele appliment AS SELECT commodity.com name, commodity.price, commodity.dis price, commodity.description, commodity.detail, commodity.com image, paymentw
                                          FROM commodity join ele appliment on commodity.com id = ele appliment.com id
                                          where commodity.category = 'ele appliment';
 DROP VIEW com ele appliment;
 CREATE VIEW com ele product AS SELECT commodity.com name, commodity.price, commodity.dis price, commodity.description, commodity.detail, commodity.com image, paymentwa
                                          FROM commodity join ele product on commodity.com id = ele product.com id
                                          where commodity.category = 'ele product';
DROP VIEW com ele product;
 CREATE VIEW com makeup AS SELECT commodity.com name, commodity.price, commodity.description, commodity.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.description.descri
                                          FROM commodity join makeup on commodity.com_id = makeup.com_id
                                          where commodity.category = 'makeup';
 DROP VIEW com makeup;
 CREATE VIEW com sport AS SELECT commodity.com name, commodity.price, commodity.dis price, commodity.description, commodity.detail, commodity.com image, type, size
                                         FROM commodity join sport on commodity.com_id = sport.com_id
                                          where commodity.category = 'sport';
 DROP VIEW com sport;
CREATE VIEW com toy AS SELECT commodity.com name, commodity.price, commodity.dis price, commodity.description, commodity.detail, commodity.com image, type, suit age
                                          FROM commodity join toy on commodity.com id = toy.com id
                                          where commodity.category = 'toy';
 DROP VIEW com toy;
 CREATE VIEW com daily necessarity AS SELECT commodity.com name, commodity.price, commodity.description, commodity.description, commodity.description, commodity.description
                                          FROM commodity join daily necessarity on commodity.com id = daily necessarity.com id
                                          where commodity.category = 'daily necessarity';
 DROP VIEW com daily necessarity;
  --店铺所拥有的商品创建视图(改store id)
 CREATE VIEW com_of_store AS SELECT com_name, category, num, price, dis_price, description, detail, com_image, after_sale, up_time
                                         FROM commodity join sell on commodity.com id = sell.com id
                                          where store id = '012345678';
DROP VIEW com of store;
```

视图面向数据库中最核 心的属性

- 简化数据访问
- 提高操作效率,
- 提供更加定制化的数据展示
- 提供数据访问的权限 控制,保护基础数据 表的安全

SQL语句-函数

购买商品

购买商品时先计 算实际支付的价 格,再向订单表 插入数据

```
DROP FUNCTION buy commodity directly(IN product id VARCHAR(20),IN user id VARCHAR(20),IN order id VARCHAR(20),IN buy num INT);
      CREATE OR REPLACE FUNCTION buy commodity directly(
           IN product id VARCHAR(20),
           IN user id VARCHAR(20),
           IN order id VARCHAR(20),
           IN buy num INT
       ) RETURNS VOID AS $$
           total payment DOUBLE PRECISION;
           UPDATE commodity SET num = num - buy num WHERE com id = product id;
1072
           SELECT calculate price (product id, user id, total payment) INTO total payment;
           INSERT INTO order VALUES (order id,product id,user id,total payment,CURRENT TIMESTAMP,CURRENT TIMESTAMP,'WAITDELIVER');
           RAISE INFO 'Calculated Total Payment: %', total payment;
           RAISE INFO 'Insert order';
           RAISE INFO 'update Commodity num';
       $$ LANGUAGE plpgsql;
       INSERT INTO red packet
       VALUES(1, '无门槛红包',2, '无门槛', '2023-12-25');
       INSERT INTO consumer recieve redpacket
       VALUES ('tb12345',1);
       DELETE FROM order WHERE order id = 'com12347tb12345';
       DELETE FROM logistics WHERE com id = 'com12347';
       UPDATE commodity SET num = 1000 WHERE com id = 'com12347';
       SELECT buy commodity directly('com12347', 'tb12345', 'com12347tb12345', 1);
       SELECT * FROM order ;
      SELECT * FROM commodity WHERE com id = 'com12347';
      SELECT * FROM food WHERE com id = 'com12347';
      SELECT * FROM logistics;
       SELECT * FROM red packet;
      SELECT * FROM consumer recieve redpacket;
```

SQL语句-函数

```
-- 计算商品价格
DROP FUNCTION calculate price( IN product id VARCHAR(20), IN user id VARCHAR(20), INOUT total payment DOUBLE PRECISION);
CREATE OR REPLACE FUNCTION calculate price(
    IN product id VARCHAR(20),
   IN user id2 VARCHAR(20),
    INOUT total payment DOUBLE PRECISION
) AS $$
    product price DOUBLE PRECISION;
   discount price DOUBLE PRECISION;
    red packet discount DOUBLE PRECISION;
    red packet id2 INT;
   SELECT price INTO product price FROM commodity WHERE com id = product id;
   SELECT dis price INTO discount price FROM commodity WHERE com id = product id;
    SELECT red packet id INTO red packet id2 FROM consumer recieve redpacket WHERE user id = user id2;
    SELECT value INTO red packet discount FROM red packet WHERE red packet id = red packet id2;
   RAISE INFO 'origin price: %', product price;
   RAISE INFO 'discount price: %', discount price;
   RAISE INFO 'red packet discount: %', red packet discount;
    total_payment := product_price - red_packet_discount - discount price;
   -- 更新红包表
   DELETE FROM consumer recieve redpacket WHERE user id = user id;
   DELETE FROM red packet WHERE red packet id = red packet id;
    RETURN:
$$ LANGUAGE plpgsql;
```

计算商品价格

根据商品的折扣,用户拥有的红包,计算最终价格,同时删除红包表中已被使用的红包信息

SQL语句-触发器

```
810 --订单表物流表触发器
811
812 CREATE OR REPLACE FUNCTION order_insert_trigger()
813 RETURNS TRIGGER AS $$
814 BEGIN
815 INSERT INTO logistics (com_id)
816 VALUES (NEW.com_id);
817 RETURN NEW;
818 END;
819 $$ LANGUAGE plpgsql;
820
821 CREATE TRIGGER insert_order_trigger
822 AFTER INSERT ON order_
823 FOR EACH ROW
824 EXECUTE FUNCTION order_insert_trigger();
```

```
CREATE OR REPLACE FUNCTION insert comsubtable_function()
  IF NEW.category = 'food' THEN
    INSERT INTO food(com_id,com_name,category,price,dis_price,num,description,detail,after sale,up time,com image)
    VALUES (NEW.com id, NEW.com name, NEW.category, NEW.price, NEW.dis_price, NEW.num, NEW.description, NEW.detail, NEW.after_sale, NEW.up_time, NEW.com_image)
    INSERT INTO cloth(com id,com name,category,price,dis price,num,description,detail,after sale,up time,com image)
    VALUES (NEW.com id, NEW.com name, NEW.category, NEW.price, NEW.dis price, NEW.num, NEW.description, NEW.detail, NEW.after sale, NEW.up time, NEW.com image)
    INSERT INTO ele_appliment(com_id,com_name,category,price,dis_price,num,description,detail,after_sale,up_time,com_image)
    VALUES (NEW.com id, NEW.com name, NEW.category, NEW.price, NEW.dis_price, NEW.num, NEW.description, NEW.detail, NEW.after sale, NEW.up time, NEW.com image)
    INSERT INTO ele product(com id,com name,category,price,dis price,num,description,detail,after sale,up time,com image)
    VALUES (NEW.com id, NEW.com name, NEW.category, NEW.price, NEW.dis price, NEW.num, NEW.description, NEW.detail, NEW.after sale, NEW.up time, NEW.com image);
    INSERT INTO makeup(com id,com name,category,price,dis price,num,description,detail,after sale,up time,com image)
    VALUES (NEW.com id, NEW.com name, NEW.category, NEW.price, NEW.dis price, NEW.num, NEW.description, NEW.detail, NEW.after sale, NEW.up time, NEW.com image)
  ELSIF NEW.category = 'sport' THEN
    INSERT INTO sport(com_id,com_name,category,price,dis_price,num,description,detail,after_sale,up_time,com_image)
    VALUES (NEW.com id, NEW.com name, NEW.category, NEW.price, NEW.dis price, NEW.num, NEW.description, NEW.detail, NEW.after sale, NEW.up time, NEW.com image)
    INSERT INTO toy(com_id,com_name,category,price,dis_price,num,description,detail,after_sale,up_time,com_image)
    VALUES (NEW.com id, NEW.com name, NEW.category, NEW.price, NEW.dis price, NEW.num, NEW.description, NEW.detail, NEW.after sale, NEW.up time, NEW.com image)
  ELSIF NEW.category = 'daily_necessarity' THEN
    INSERT INTO daily necessarity(com_id,com_name,category,price,dis_price,num,description,detail,after_sale,up_time,com_image)
    VALUES (NEW.com_id, NEW.com_name, NEW.category, NEW.price, NEW.dis_price, NEW.num, NEW.description, NEW.detail, NEW.after_sale, NEW.up_time, NEW.com_image)
```

订单表物流表触发器

订单表物流表触发器 (order_insert_trigger):

- · 与订单表(order_)相关联。
- · 当在订单表中插入新记录(即创建新订单)后,触 发器order_insert_trigger()会被执行。
- 当新订单的商品ID(com_id)插入到物流表(logistics) 中,表示该商品需要物流处理。

商品大表与小表触发器

- · 与商品主表(假设表名为commodity)相关联。
- 当在商品主表中插入新记录后,触发器 insert_comsubtable_function()会被执行。
- 触发器函数根据新商品的类别(NEW.category),将商品信息插入到相应的商品子表中,以实现数据的分类存储。

报告整体框架与工作量统计

- 我们共创建了57个表,32个实体表,23个 关系表,共计上百个主键外键,设计12个 视图、14个触发器、9个函数
- > 迭代了数十版ER图,后端贡献代码数千行
- 共撰写76页,共17452字的实验报告,细化表结构设计时列出数百行excel表
